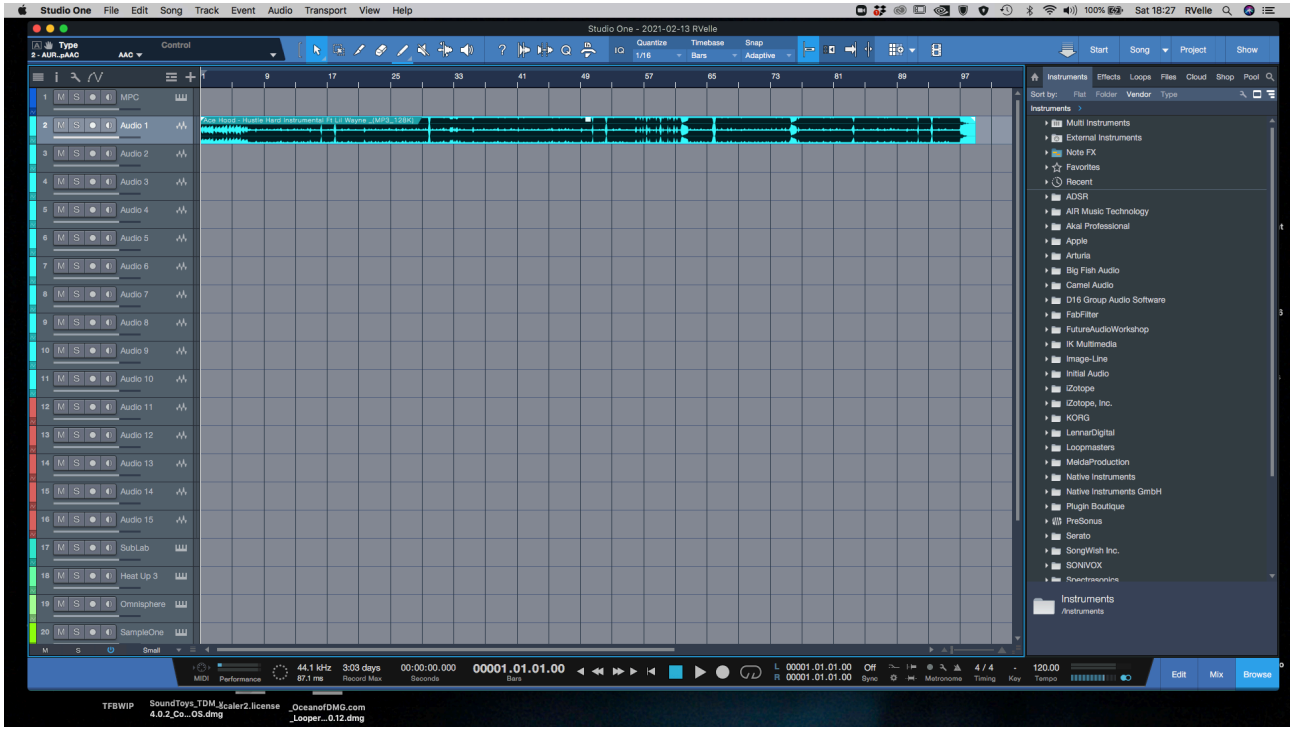
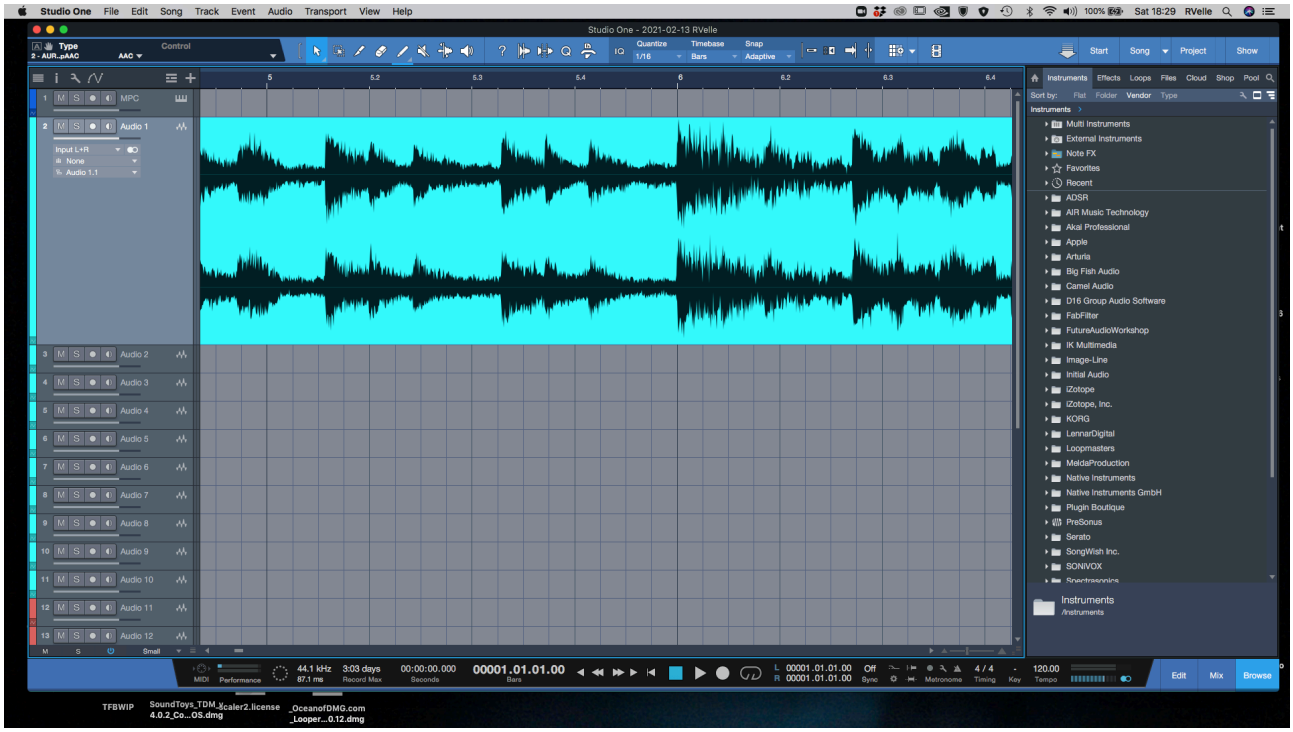
Digital Rockstarz Remix Basics Part 2

TIP 2

Now that we've got our *Acapella* we need to import it into our *Digital Audio Workstation,* I personally use ***Presons Studio One*** but the principal is the same for any DAW, In Studio One it's just a matter of dragging and dropping the audio file onto the timeline in the arrange window, we also need to import the





full version of the song into the session (I found this technique helps in lining up the *Acapella* flawlessly onto the grid and in time). We already know what the tempo is so input that into the session and so now we just need to line the kick drum up onto the grid (have the metronome on as a aural guide).
